DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims have been considered but are moot in view of the new ground(s) of rejection.

Applicant argues that Abecassis fails to teach detecting the occurrence of an incoming request for communications during the video program, and pausing the program in response to the occurrence of the incoming request (response pages 14-16).

The examiner has relied upon newly cited U.S. Patent 6,510,209 to Cannon, to teach pausing automatically in response to incoming communications.

Cannon discloses a telephone reception system in which a telephone communicates with a VCR or videodisc player, if a user is watching a movie stored on the VCR/videodisc player and receives a phone call, the caller ID is displayed on the user's television and the movie is automatically paused (column 2, lines 41-65).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

2. Claims 1-5, 8, 9, 12-14, 16, 19-26, 29, 30, 33-35, 37, 40-47, 50, 51, 54-56, 58, 61-63, and 79-81 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent 6,553,178-B2 to Abecassis in view of U.S. Patent6,510,209 to Cannon.

Regarding claim 1, Abecassis discloses a method (figure 13) for automatically pausing a video program in response to an occurrence of an event, comprising:

receiving a video program (step 1301, figure 13) and outputting the video program for presentation on a display device;

detecting an occurrence of a communications event during the video program (acceptance of a communication, step 1311):

pausing the video program in response to the detection of the occurrence of the communications event (steps 1321-1323, column 52, lines 43-56); and

outputting a signal for displaying an indication of the occurrence of the communications event (figures 14a/b, step 1341, displaying an incoming callers contact information and display of data relating to the incoming communication which may include data and images, column 52, lines 34-65).

Abecassis fails to disclose detecting an occurrence of an incoming request and pausing the video program in response to detecting the incoming request.

Cannon discloses a telephone reception system in which a telephone communicates with a VCR or videodisc player, if a user is watching a movie stored on the VCR/videodisc player and receives a phone call, the caller ID is displayed on the

Art Unit: 2611

user's television and the movie is automatically paused (column 2, lines 41-65), thus enabling a user to accept the incoming call without missing a portion of the movie.

Therefore, it would have been obvious to one skilled in the art at the time of invention to modify Abecassis to detect the occurrence of an incoming request and automatically pause the video as taught by Cannon, thus enabling a user to accept the incoming call without missing a portion of the movie.

Regarding claims 2-3, 23-24, and 44-45, Abecassis discloses detecting an incoming telephone number and displaying a telephone number associated with the incoming call (step 1310, column 51, line 51-63, column 52, 13-17, figure 14/a).

Regarding claims 4, 8, 9, 25, 29, 30, 46, 50, and 51, Abecassis discloses that the incoming communication may be a paging message (column 51, lines 22-24).

Regarding claims 5, 26, and 47, Abecassis discloses outputting a graphic associated with the caller's telephone number (column 53, line 57-column 54, line 3).

Regarding claims 12, 33, 54, Abecassis discloses that a user may issue a play command and the video resumes from the same point (column 53, lines 12-49).

Regarding claims 13, 14, 16, 34, 35, 37, 55, 56, and 58, Abecassis discloses the use of a fast forward, rewind and frame advance function (column 40, lines 26-31)

Art Unit: 2611

Regarding claims 19-21,40-42, 61-63, 70, and 72, Abecassis discloses that a communications from a caller may include a transmitted graphic, or may utilize a locally stored graphic, which is then displayed on the user's display (column 55-column 54, line 3).

Regarding claim 22, Abecassis discloses an apparatus (figure 5) for automatically pausing a video program in response to an occurrence of an event, comprising:

a receive module 502 for receiving a video program and outputting the video program for presentation on a display device (display processor 513, column 18, line 52-column 19, line 5, column 20, lines 40-48);

a detection module 500 (RAVIT) for detecting occurrence of a communications event during the video program (acceptance of an incoming call or message, column 52, lines 18-27);

a pause module for pausing the video program in response to the detection of the occurrence of the communications event (column 52, lines 25-42); and

an output module for outputting a signal for displaying an indication of the occurrence of the communications event (display processor 513, column 52, lines 51-56).

Abecassis fails to disclose detecting an occurrence of an incoming request, the request coming from other than a viewer of the video program and pausing the video program in response to detecting the incoming request.

Art Unit: 2611

Cannon discloses a telephone reception system in which a telephone communicates with a VCR or videodisc player, if a user is watching a movie stored on the VCR/videodisc player and receives a phone call, the caller ID is displayed on the user's television and the movie is automatically paused (column 2, lines 41-65), thus enabling a user to accept the incoming call without missing a portion of the movie.

Therefore, it would have been obvious to one skilled in the art at the time of invention to modify Abecassis to detect the occurrence of an incoming request from a party other than viewer and automatically pause the video as taught by Cannon, thus enabling a user to accept the incoming call without missing a portion of the movie.

Regarding claim 43, Abecassis discloses a computer program product comprising:

A computer readable medium containing instructions for controlling a computer system (column 2, lines 13-17) to perform a method for automating pausing a video program in response to an occurrence of an event (figure 13)

receiving a video program (step 1301, figure 13) and outputting the video program for presentation on a display device;

detecting an occurrence of a communications event during the video program (acceptance of a communication, step 1311):

pausing the video program in response to the detection of the occurrence of the communications event (steps 1321-1323; column 52, lines 43-56); and

Art Unit: 2611

communications event (figures 14a/b, step 1341, displaying an incoming callers contact information and display of data relating to the incoming communication which may include data and images, column 52, lines 34-65).

Abecassis fails to disclose detecting an occurrence of an incoming request, the request coming from other than a viewer of the video program and pausing the video program in response to detecting the incoming request.

Cannon discloses a telephone reception system in which a telephone communicates with a VCR or videodisc player, if a user is watching a movie stored on the VCR/videodisc player and receives a phone call, the caller ID is displayed on the user's television and the movie is automatically paused (column 2, lines 41-65), thus enabling a user to accept the incoming call without missing a portion of the movie.

Therefore, it would have been obvious to one skilled in the art at the time of invention to modify Abecassis to detect the occurrence of an incoming request from a party other than viewer and automatically pause the video as taught by Cannon, thus enabling a user to accept the incoming call without missing a portion of the movie.

Regarding claim 79-81, Abecassis discloses a display device, which is associated with a remote control device 541, a user may pause a program by picking up a telephone receiver (column 52, lines 18-26).

Cannon discloses a telephone reception system in which a telephone communicates with a VCR or videodisc player, if a user is watching a movie stored on

the VCR/videodisc player and receives a phone call, the caller ID is displayed on the user's television and the movie is automatically paused (column 2, lines 41-65), thus the request does not originate from the user.

3. Claims 6, 7, 27, 28, 48, and 49 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent 6,553,178-B2 to Abecassis in view of U.S. Patent 6,510,209 to Cannon in further view of the MSN Messenger Service (of record).

Regarding claims 6, 7, 27, 28, 48, and 49, Abecassis discloses that the incoming communication may be in the form of paging, messaging or any digital transmission (column 51, lines 22-24).

The combination of Abecassis and Cannon does not disclose detecting an incoming email message.

The MSN Messenger service automatically detects and notifies a user when they receive new messages in their email account and is integrated with a user's Outlook Express mail client, thus enabling a user to view an email message on their display device (entire document).

Therefore, it would have been obvious to one skilled in the art at the time of invention to modify the combination of Abecassis and Cannon to detect an email message and display a message as taught by MSN Messenger service thus enabling a user to respond to an urgent communication.

4. Claims 10-11, 31, 32, 52, and 53 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent 6,553,178-B2 to Abecassis in view of U.S. Patent 6,510,209 to Cannon in further view of U.S. Patent 6,349,410 to Lortz (of record).

Regarding claims 10-11, 31, 32, 52, and 53, Abecassis discloses a video on demand system in figures 13-14b which uses a PCTV like device (figure 5, column 18, lines 33-51), in which a user may receive an incoming call or page, a user receives an indication for an incoming telephone call/page which includes caller ID information, text information or a graphic, if the user accepts the incoming message the set top box transmits a signal to the video server and pauses the video (column 51, lines 16-column 54, line 53).

The combination of Abecassis and Cannon does not disclose detecting an incoming webpage and displaying it on a display device.

Lortz discloses a system which detects incoming web content, displays a notification to a user, a user then selects the web page for display, and the currently watched program is paused and recorded onto a hard drive (Figure 2, column 3, line 29-column 4, line 28).

Therefore, it would have been obvious to one skilled in the art at the time of invention to modify the combination of Abecassis and Cannon, to detect and display the incoming web page, as taught by Lortz, in order to enable a user to fully watch a program of interest without missing any portion of the broadcast.

Application/Control Number: 09/521,614

5. Claims 15, 36, and 57 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent 6,553,178-B2 to Abecassis in view of U.S. Patent 6,510,209 to Cannon in further view of U.S. Patent 6,543,053 to Li (of record).

Regarding claims 15, 36, and 57, Abecassis discloses the use of a fast forward, rewind and frame advance function (column 40, lines 26-31).

The combination of Abecassis and Cannon does not disclose the use of a slow motion signal.

Li discloses a VOD service, which enables VCR like functions including slow motion (column 8, lines 57-64) thus enabling a user to see more detail by viewing a image slowly.

Therefore it would have been obvious to one skilled in the art at the time of invention to modify the combination of Abecassis and Cannon to utilize a slow motion signal as taught by Li thus enabling a user to watch a video and see much more detail.

6. Claims 17, 38 and 59 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent 6,553,178-B2 to Abecassis in view of U.S. Patent 6,510,209 to Cannon in further view of U.S. Patent 6,052,508 to Mincy (of record).

Regarding claims 17, 38 and 59, Abecassis discloses the use of a fast forward, rewind and frame advance function (column 40, lines 26-31).

The combination of Abecassis and Cannon does not disclose the use of a frame back function.

Art Unit: 2611

Mincy discloses the use of a frame back key which enables a user watching a video clip to view the previous frame (column 19, lines 47-57) thus enabling a user to view a clip in higher detail by seeing the changes for each frame.

Therefore it would have been obvious to one skilled in the art at the time of invention to modify the combination of Abecassis and Cannon to utilize a frame back function as taught by Mincy thus enabling a user to view a clip in higher detail by seeing the changes for each frame.

7. Claims 18, 39, and 60 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent 6,553,178-B2 to Abecassis in view of U.S. Patent 6,510,209 to Cannon in further view of the ReplayTV manual (of record).

Regarding claims 18, 39, and 60, Abecassis discloses the use of a skip function (column 39, lines 53-58).

The combination of Abecassis and Cannon does not disclose utilizing a jump signal to display a program from the current point of transmission.

The ReplayTV manual discloses the use of a button on a remote control that enables a user to return to a live broadcast after pausing, rewinding or stopping a video stream, thus enabling a user to skip unwatched portions of a video stream.

Therefore, it would have been obvious to one skilled in the art at the time of invention to modify the combination of Abecassis and Cannon to utilize a jump signal to return to live display as taught by ReplayTV, so that a user could skip unwanted

portions of the video without having to watch it via a fast forward or segment jump command.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hunter B. Lonsberry whose telephone number is 571-272-7298. The examiner can normally be reached on Monday-Friday during normal business hours.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Christopher Grant can be reached on 571-272-7294. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
